

Monadelphous use RobobAI primarily to gain insights into supplier activity across different regions and comply with ATO supplier validation requirements.

The Challenge

- Monadelphous needed a tool that enabled them to manage free text and consolidate unstructured data into a unified, single source of spend which could be categorised and classified to gain overall expenditure spend insights and consolidate their vendor base.
- Managing vendor activity across regions and departments.
- Clear tracking of local and indigenous spend.

The Solution

- RobobAI corralled Monadelphous' spend data into a central source where it was automatically categorised and classified to UNSPSC taxonomy.
- Through dynamic visual dashboards, Monadelphous gained spend visibility, at high level and granular detail, across different regions and departments.
- Having a central source of spend data gave Monadelphous the ability to clearly track spend origins.

The Result

- The procurement team and key stakeholders in each division were empowered to make better business decisions, faster.
- Time to manage ATO legislative reporting requirements was significantly reduced.
- Through an elevated analytics ability, Monadelphous were able to better manage anti-corruption and Modern Slavery risks.

“

RobobAI is a mature platform that helped us understand what the expenditure drivers were for each division. It was also invaluable in supporting regular ATO reporting obligations.
